

Quadrilateral Construction

You will need: geoboards, rubber bands, geoboard paper, ruler

1. Work in pairs to create quadrilaterals on your geoboard.
2. Safely using the rubber bands, make as many figures as possible in 5 minutes.
3. Each figure you create must be recorded on the geoboard paper. Make sure that you are recording your shapes accurately!
4. Cut out the figures and sort them based on the number of parallel sides they have.
5. Glue your quadrilateral groups onto a separate sheet of paper and label them appropriately.
